THEME 2019

Solutions for multimodal ecosystems

CIRCULAR ECONOMY

From design to day-to-day operations, this theme focuses on Managing circular economy, New technologies and life cycles of new materials, and Innovation in circular economy. It will also encompass the ever-innovative Michelin Challenge Design.

GOODS TRANSPORTATION AND MULTIMODALITY

This theme focuses on Logistics for cities and citizens and End-to-end logistics for goods transportation over long distances as well as last-mile delivery.

DECARBONIZATION AND AIR QUALITY

Through the axes of Improving air quality, Accelerating decarbonization and Practicing decarbonization, this theme explores local and global environmental issues in light of the Paris Agreement on climate change.

MULTIMODAL URBAN TRANSIT AND SOCIETY

This theme explores how social trends, public transit, transportation habits, technology and safety have an impact on New mobilities, Urbanism and infrastructure, Multimodal transit and People-friendly mobility.

INNOVATIVE TECHNOLOGIES

From The data commons to Automated and connected vehicles to AI-powered mobility, the transportation ecosystem thrives on inspiring, efficient new technologies.

THE ENVIRONMENT

Everything is designed with the intention for participants to explore content in lively manners and collaborate in unusual ways.

Surprises and immersive learning punctuate the event as participants discover innovations in topics such as mobility services, multimodality, mass transit, energy transition and door-to-door transport.

This is implemented all across the ecosystem.

YOU WILL...

LEARN AND ACT

Participants are re-energized and re-tooled to identify solutions and take part into actions that will change their business and the world of mobility.

NETWORK

Participants leverage the ecosystem to network and imagine the future of sustainable transportation.

EXPERIENCE

Every year, the setting for the event is reinvented to serve as the perfect stage for decision makers and creative minds.

Conferences

Hear from the world's top innovators in a multimedia stage environment. This annual dose of thought-provoking inspiration will undoubtedly lead to concrete solutions for a sustainable and connected mobility.

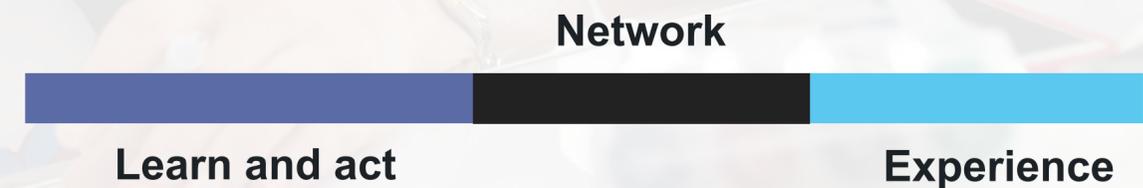

Working sessions

Nothing beats putting concepts to the test. In the form of a Think Tank or presentations led by renowned experts, working sessions engage participants in a collaborative activity based on their specific field of work.

Labs

Unique experiences designed to encourage new ways of thinking. C2 conceives these atypical environments designed to throw participants off-guard and create ideal conditions for new thought patterns to emerge.

TAKE PART IN THE FUTURE OF MOBILITY

AFTER

- Identification of shared positions
- Knowledge sharing (Minutes)
- Collaborative platform (Insights)

BEFORE

- Communities of interest
- Mobility projects & experimentations
- Problems

DURING

- Discover tomorrow's mobility innovations
- Connexions and networking
- Concrete actions:
 - New Communities of interest
 - Mobility projects
 - New experimentations
 - Movin'On Lab

100% CARBON NEUTRAL

Our Eco-Friendly Approach

Last year, Movin'On Summit has earned a level 3 **BNQ 9700-253/2010** certification. This year, our aim is to attain the same level, but with an even higher score than last year. One of our target is to maintain a material reclamation rate of 70% or higher during the event.

To avoid generating unnecessary plastic, no single-use plastic bottle is sold at Movin'On; but there are water stations. Numerous low-carbon transportation options are offered to participants. It should also be noted that the entire site is supplied with hydro-electricity; no fossil fuel generator is used.

CARBON COMPENSATION

Carbon offsets are bought to compensate our emissions which results in being 100% carbon neutral.

RECYCLING

Shipping containers, accessories, tables and more are reused and recycled while making it easy for participants to do the same.

LOCAL FOOD, COMPOST & CERAMIC

Our suppliers prioritize regional and vegetarian options. Moreover, we use exclusively compostable or ceramic dishware that will convert into soil.
